

SKS 155 CALIBER BAR

Universal Muzzle Boresight Devices

The higher the hit probability of a weapon, the greater its combat value. Battlefield supremacy, increased survivability and less ammo usage are among the easily achievable advantages of a well-adjusted weapon system. The risks of collateral damage and friendly fire are comparably minimized as is the risk of counter-fire caused by missing the target with the first shot – and missing the target is no option.

The Universal Muzzle Boresight Devices from Airbus DS Optronics provide the cost effective means to adjust aiming sights of almost all firearms in today's service. Being compatible from 5.56 to 155 mm caliber it is usable from factory to crew-level for long and short range alignments. The Universal Muzzle Boresight Devices ensure highest precision, where it is needed – on target.
